DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to a method of bonding substrates with a correction movement, classified in class 156, subclass 64.
 - II. Claims 9-13, drawn to a device for bonding substrates utilizing correction movements, classified in class 156, subclass 358.
 - III. Claims 14-18, drawn to a device for bonding substrates utilizing an elastic member, classified in class 156, subclass 358.
 - IV. Claims 19-24, drawn to a method of bonding substrates involving the detection of elastic deformation, classified in class 156, subclass 64.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I/IV and II/III are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used connect and position devices which attach together via Velcro, rivets, screws or other non-bonding connections. A bonding method would require a bonding step.

3. Inventions I and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are

shown to be separately usable. In the instant case, invention II has separate utility such as bonding structures without the need for a coefficient correction. See MPEP § 806.05(d).

4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as attaching structures without the need for a coefficient correction. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, III or IV, restriction for examination purposes as indicated is proper.

7. A telephone call was made to C Frederick Koenig on 3/5/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George R. Koch III whose telephone number is (571)

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Fiorilla can be reached on (571) 272-1187. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
